PUBLIC HEALTH WARNING

REPORT DAY-BITING MOSQUITOES!

Please TEXT the District at (916) 756-9334

Aedes aegypti

Yellow Fever mosquito

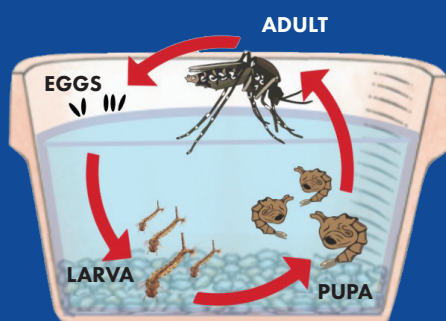

Actual Size: About ¼ inch long

WHY THE CONCERN?

Invasive mosquitoes continue to be found at many homes throughout Sacramento County. We need your help to control them. *Aedes aegypti* pose a serious health threat because they can transmit several diseases.

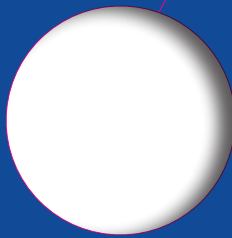

About *Aedes aegypti* Mosquitoes

- Small dark mosquito that bites during the day and can live indoors and outdoors.
- They lay eggs in small sources of water around homes and are very difficult to detect.
- Invasive *Aedes* are "container breeders". Individual eggs are glued to the sides of containers. Eggs are resistant to drying out and can survive for many months until water covers them.

The Sacramento-Yolo Mosquito & Vector Control District is currently conducting door-to-door inspections, setting traps and making treatments in your neighborhood to control these mosquitoes. THERE IS NO CHARGE FOR DISTRICT SERVICES.

invasive mosquitoes

MOSQUITO BREEDING SOURCES THAT NEED YOUR ATTENTION

Planters with Water

Bird Baths

Green Water

Outside Toys

Water Fountains

Buckets

**Plant axils are where
leaf meets stem**

- ☐ Drain and scrub or remove saucers under plants.
- ☐ Cover bins, buckets, and tubs with fitted lids.
- ☐ Remove miscellaneous containers.
- ☐ Re-direct sprinklers so containers are not filled.
- ☐ Empty birdbaths/fountains (every 3 days).
- ☐ Empty/refill pet drinking water (every 3 days).
- ☐ Clean out/drain rain gutters and drains in yard.
- ☐ Remove plants that hold water in yard.
- ☐ **To avoid the spread of these mosquitoes, DO NOT
transport plants and other containers from one
place to another.**

PREVENT MOSQUITO BITES

Use an effective repellent containing DEET, picaridin, IR3535,
or oil of lemon eucalyptus when outdoors. *Always follow
label instructions.*
